# **Introduction**

Racquets, also known as rackets, is an exceptionally fast indoor sport played in a large enclosed court with extremely hard walls and a small, high-speed ball. It is widely regarded as one of the fastest ball-sports in the world, with ball speeds often exceeding 180 miles per hour. The game demands extraordinary reflexes, precise timing, disciplined footwork, tactical anticipation, and a deep understanding of angles and rebounds. The sport originated in the 18th century in the debtors' prisons of London, particularly the Fleet and King's Bench prisons, where inmates improvised a game by hitting a ball against courtyard walls. Its popularity grew, spreading into public schools such as Eton and Harrow. By the 19th century, permanent courts were constructed, and formal rules were codified. Players compete in a massive court, far larger and more open than squash, using long, tightly strung oval racquets capable of generating tremendous power. The ball is handmade, hard, and exceptionally lively, contributing to the game's intense pace. Techniques include deep drives, angle shots, volleys, and aggressive attacking strokes. Training emphasizes raw speed, endurance, precision, and tactical discipline. Although played in relatively few venues worldwide, racquets maintains a highly dedicated global community and a long tradition of elite competition, including British, Canadian, World, and school championships.

Although played in relatively few venues worldwide, racquets maintains a highly dedicated global community and a long tradition of elite competition, including British, Canadian, World, and school championships.Racquets, also known as rackets, is an exceptionally fast indoor sport played in a large enclosed court with extremely hard walls and a small, high-speed ball. It is widely regarded as one of the fastest ball-sports in the world, with ball speeds often exceeding 180 miles per hour. The game demands extraordinary reflexes, precise timing, disciplined footwork, tactical anticipation, and a deep understanding of angles and rebounds. The sport originated in the 18th century in the debtors' prisons of London, particularly the Fleet and King's Bench prisons, where inmates improvised a game by hitting a ball against courtyard walls. Its popularity grew, spreading into public schools such as Eton and Harrow. By the 19th century, permanent courts were constructed, and formal rules were codified. Players compete in a massive court, far larger and more open than squash, using long, tightly strung oval racquets capable of generating tremendous power. The ball is handmade, hard, and exceptionally lively, contributing to the game's intense pace. Techniques include deep drives, angle shots, volleys, and aggressive attacking strokes. Training emphasizes raw speed, endurance, precision, and tactical discipline. The sport originated in the 18th century in the debtors' prisons of London, particularly the Fleet and King's Bench prisons, where inmates improvised a game by hitting a ball against courtyard walls. Its popularity grew, spreading into public schools such as Eton and Harrow. By the 19th century, permanent courts were constructed, and formal rules were codified. Players compete in a massive court, far larger and more open than squash, using long, tightly strung oval racquets capable of generating tremendous power. The ball is handmade, hard, and exceptionally lively, contributing to the game's intense pace. Techniques include deep drives, angle shots, volleys, and aggressive attacking strokes. Training emphasizes raw speed, endurance, precision, and tactical discipline. Although played in relatively few venues worldwide, racquets maintains a highly dedicated global community and a long tradition of elite competition, including British, Canadian, World, and school championships.

Racquets, also known as rackets, is an exceptionally fast indoor sport played in a large enclosed court with extremely hard walls and a small, high-speed ball. It is widely regarded as one of the fastest ball-sports in the world, with ball speeds often exceeding 180 miles per hour. The game demands extraordinary reflexes, precise timing, disciplined footwork, tactical anticipation, and a deep understanding of angles and rebounds.
